TITLE: Hydrophilically modified poly-isocyanate(s) - used
as crosslinkers in
dye baths for textiles, as dispersions for textile
finishing, and for prodn. of
textiles with wash-fast lustre

INVENTOR: BLAUTH, M; FUCHS, H ; HAEBERLE, K ; REICHERT, J ;
HUMMERICH, R
; REINCKE, K ; HABERLE, K

PATENT-ASSIGNEE: BASF AG[BADI]

ABSTRACTED-PUB-NO: EP 758417B

BASIC-ABSTRACT: The use of hydrophilically-modified polyisocyanates (I) for the following applications in the textile industry is claimed: (i) as crosslinkers for binders used in aq. pigment dye liquors for dyeing textiles; (ii) in the form of aq. dispersions contg. little or no organic solvent or other emulsifiers, for finishing textile materials; and (iii) for the prodn. of textiles with a wash-fast lustre. Also claimed are: a process for dyeing textiles in aq. pigment dye baths using (I) as crosslinker for the binder, a textile finishing process using aq. dispersions of (I) as above, and a process for the prodn. of textiles with a wash-fast lustre by using (I) as above. Also claimed are: aq. pigment dye baths for the above process, contg. 0.01-10 wt. % (I) in addn. to pigments, binders, water and conventional additives, and aq. dispersions for textile finishing contg. 0.01-15 wt. % (I) with no organic solvent or other emulsifier.

USE - Used for dyeing and finishing textiles.

ADVANTAGE - The use of (I) as crosslinkers gives deep colours with a high resistance to washing and rubbing; the dyed fabric has no smell due to the crosslinker, and there is no risk to health etc. due to formaldehyde emission. In addn., dispersions of (I) are stable for several hrs. in dye baths. Finishing preps. contg. (I) gives high-quality textiles with a soft feel and very low shrinkage after washing; they require no organic solvent or additional emulsifier, no heating and no cleavage of blocking agent. In application (iii), the use of (I) gives textiles which do not lose their lustre when washed, without emission of paraffin or formaldehyde during heat treatment
